

What is **LUCKY DUST**?

Lucky Dust is a rumen bolus specifically developed to **prevent ketoses** in post calving dairy cows.

Ketoses is a metabolic syndrome caused by an over-mobilisation of adipose reserves in cows and by the subsequent increase in concentration of ketone bodies at blood level.

HOW DOES IT WORK ON?

IT IMPROVES INCREASE OF MILK PRODUCTION AND INCREASES PROTEINS PRESENCE

IT SUPPORTS FAT ACIDS METHABOLISM

IT SUPPLIES EASILY ABSORBED ENERGETIC SOURCE

WHAT DOES IT CONTAIN?

- ✓ *Calcium pidolate* provides a large amount of calcium available in the intestine
- ✓ *Carnitin* plays a key role into fat acids oxidation
- ✓ *Maltodextrins* support energy metabolism, providing modulated energy availability
- ✓ *Methionine* optimizes protein synthesis in milk

PACKAGING

Box with
20 Bolus of 90g
